SUMMARY

Full Stack Java Engineer with 1+ years of production experience building enterprise web applications, Spring Boot microservices, REST and gRPC APIs, event-driven systems, and modern React/Next.js frontends. Delivered compliance-heavy Identity Governance infrastructure across 8+ Spring Boot microservices with Kafka event pipelines, Spring Security, Spring AOP audit flows, gRPC inter-service communication, and a production Next.js dashboard. Shipped scalable Node.js and Next.js platform features with database optimization, API performance improvements, and zero-downtime infrastructure migration. Strong focus on Java backend engineering, clean architecture, frontend-backend integration, database design, security, reliability, and production-ready delivery.

WORK EXPERIENCE

Full Stack Java Engineer *Dec '25 – Present*
Intimec via MicroTechX Remote

Owned Access Portal features across Spring Boot microservices and the Next.js dashboard, contributing to backend architecture, audit infrastructure, access automation, secure APIs, and frontend integration on a compliance-heavy Identity Governance platform.

- Built and enhanced Java Spring Boot microservices for authentication, identity lifecycle management, access requests, audit logging, entitlement assignment, and inter-service workflows.
- Migrated synchronous service-to-service communication from REST to gRPC reducing inter-service latency by 50% across Auth, Identity, and Access Portal workflows.
- Architected the generic rule-based engine assigning roles, entitlements, and access items to identities through grouped condition evaluation with CRON and event-based scheduling.
- Refactored the audit log schema to be PII-free, restoring compliance alignment without losing forensic traceability, and resolved a Spring AOP self-invocation bypass that was silently skipping audit advice on critical methods.
- Standardised the frontend theme, color system, and shared component library across the Next.js dashboard and documented the conventions that the team now applies to every new feature, eliminating UI drift across the platform.

Full Stack Engineer *Sep '25 – Jan '26*
Digital Upgraders LLC Remote

Built and maintained backend APIs and frontend features for a production social platform serving photographers, videographers, and creative professionals across web and mobile.

- Built and maintained REST APIs for feeds, notifications, user interactions, authentication, creator profiles, media workflows, and production client integrations.
- Cut feed load time from 3s to 700ms by fixing query structure, indexing, payload size, and caching bottlenecks across the production feed system.
- Fixed duplicate notifications by redesigning concurrent write flows with proper database transactions, restoring consistency across the notification system.
- Resolved Android, iOS, and Safari rendering issues by tracing API response behavior, client-side performance bottlenecks, and cross-platform browser differences.
- Led a zero-downtime migration from AWS to Fly.io, reworking infrastructure, CI/CD, DNS, and service configuration on a live production platform.

PROJECTS

Moodly | AI Experience Booking Platform | Demo

- Designed a full stack booking platform with secure backend APIs, async AI processing, real-time updates, and a cross-platform React Native frontend for hosts and users.
- Built RESTful backend APIs for authentication, booking lifecycle management, mood analysis, host actions, recommendation results, and event-driven status updates.

- Designed a multimodal emotion detection pipeline processing voice recordings and facial images through separate classification models, routing results via an async message queue to a booking recommendation engine that selects experiences based on detected mood state.
- Implemented strict input validation, secure authentication, and unit-tested business logic across all backend critical paths, while enforcing TypeScript-strict component architecture on the frontend to reduce edge-case bugs in production.

Memingo | Language Learning Platform | Demo

- Built a full stack language learning platform with lesson flows, user progress tracking, leaderboard APIs, AI recommendations, and interactive frontend learning components.
- Identified and resolved a critical leaderboard bottleneck where rankings were recalculated on every read request, replaced with a write-time precomputed cache, reducing API response time from 30 seconds to 90ms and eliminating the drop-off on the rankings screen.
- Built 9 interactive lesson format components on the frontend and a real-time object detection module on the backend that intercepts camera frames, runs item classification, and returns vocabulary and cultural context as a single structured API response.
- Integrated a conversational AI chatbot with session-aware context management and structured output parsing, delivering personalised learning recommendations that adapt based on the learner's progression state across sessions.

SKILLS

Languages Java, TypeScript, JavaScript, Python

Backend Spring Boot, Spring MVC, Spring Security, Spring AOP, Node.js, Express.js, NestJS, FastAPI, REST APIs, gRPC

Frontend Next.js, React.js, React Native, TypeScript, Tailwind CSS, Shadcn UI, Framer Motion

Architecture Microservices, Event-Driven Architecture, Distributed Systems, Kafka, RabbitMQ, WebSockets

Databases PostgreSQL, MySQL, MongoDB, SQLite, Redis, Supabase, Firebase, OpenSearch

Security JWT, OAuth 2.0, RBAC, Rate Limiting, Spring Security, Input Validation, Audit Logging

Cloud AWS (S3, RDS, EC2), Firebase, Supabase, Dokploy, Fly.io

DevOps Docker, GitHub Actions, CI/CD, Maven, Git

Tools Postman, Swagger, Stripe, VS Code, IntelliJ IDEA

AWARDS

Runner-up, App Development Hackathon (2025) *May '25*
Organized by Punjab University

Ranked, ICPC Asia Topi Online Programming Contest (2024) *Nov '24*
Organized by International Collegiate Programming Contests

EDUCATION

Bachelor's degree in Computer Science, University of Management and Technology – UMT *Oct '21 – Aug '25*
